Product Description

BIO is an indirubin compound that is cell-permeable and is a selective, potent, and reversible inhibitor of glycogen synthase kinase (GSK) 3 α and GSK3 β (IC_{50} = 5 nM) which acts by competing for the ATP binding site of GSK3. GSK3 is a serine/threonine kinase that is a key inhibitor of the WNT pathway; therefore BIO functions as a WNT activator. It shows some inhibitory activity against cyclin-dependent kinase (CDK) 5 (IC_{50} = 83 nM), CDK2 (IC_{50} = 300 nM), and CDK1 (IC_{50} = 320 nM), and little activity against other common kinases including MAPK, PKA, PKC, and PKG (Meijer et al.).

Molecular Name:	BIO
Alternative Names:	GSK 3 IX; MLS 2052; 6-Bromoindirubin-3'-oxime
CAS Number:	667463-62-9
Chemical Formula:	C ₁₆ H ₁₀ BrN ₃ O ₂
Molecular Weight:	356.2 g/mol
Purity:	≥ 98%
Chemical Name:	6-bromo-3-[(3E)-1,3-dihydro-3-(hydroxyimino)-2H-indol-2-ylidene]-1,3-dihydro-(3Z)-2H-indol-2-one
Structure:	

Properties

Physical Appearance:	A red crystalline solid
Storage:	Product stable at -20°C as supplied. Protect from prolonged exposure to light. For product expiry date, please contact techsupport@stemcell.com.
Solubility:	· DMSO ≤ 25 mM · Absolute ethanol ≤ 1.5 mM For example, to prepare a 10 mM stock solution in DMSO, resuspend 1 mg in 281 μ L of fresh DMSO.

Prepare stock solution fresh before use. Information regarding stability of small molecules in solution has rarely been reported, however, as a general guide we recommend storage in DMSO at -20°C. Aliquot into working volumes to avoid repeated freeze-thaw cycles. The effect of storage of stock solution on compound performance should be tested for each application.

Compound has low solubility in aqueous media. For use as a cell culture supplement, stock solution should be diluted into culture medium immediately before use. Avoid final DMSO concentration above 0.1% due to potential cell toxicity.

Published Applications

MAINTENANCE AND SELF-RENEWAL

- Maintains self-renewal of mouse embryonic stem (ES) cells in the absence of LIF (Sato et al.).
- Maintains self-renewal of human ES cells in unconditioned medium through a SMAD 2/3 dependent mechanism (James et al.; Sato et al.).
- Induces proliferation of neonatal and adult rat cardiomyocytes (Tseng et al.).

REPROGRAMMING

- Enhances reprogramming of mouse fibroblasts, neural stem cells, and thymocytes to induced pluripotent stem (iPS) cells (Lluis et al.).

DIFFERENTIATION

- Promotes differentiation of cardiomyocytes from human ES and iPS cells (Lian et al.).
