Product Description

GDC-0941 is an inhibitor of phosphatidylinositol-4,5-bisphosphate 3-kinase (PI3K). It inhibits class I catalytic subunits of PI3K p110 α , β , δ , and γ with IC₅₀ values of 3, 33, 3, and 75 nM, respectively, by binding near the ATP binding pocket (Folkes et al.; Berndt et al.). It shows selectivity against class II, III, and IV PI3K isoforms as well, but with lower efficacy; for example, it inhibits phosphatidylinositol-4-phosphate 3-kinase C2 domain subunit β (C2 β , Class II) and mammalian target of rapamycin (mTOR, Class IV) in the high nanomolar range and most others in the micromolar range (Folkes et al.).

Molecular Name:	GDC-0941
Alternative Names:	GNE 0941, Pictilisib, Pictrelisib
CAS Number:	957054-30-7
Chemical Formula:	C ₂₃ H ₂₇ N ₇ O ₃ S ₂
Molecular Weight:	513.6 g/mol
Purity:	≥ 98%
Chemical Name:	2-(1H-indazol-4-yl)-6-[[4-(methylsulfonyl)-1-piperazinyl]methyl]-4-(4-morpholinyl)-thieno[3,2-d]pyrimidine
Structure:	

Properties

Physical Appearance:	A crystalline solid
Storage:	Product stable at -20°C as supplied. Protect from prolonged exposure to light. For product expiry date, please contact techsupport@stemcell.com.
Solubility:	· DMSO ≤ 45 mM For example, to prepare a 10 mM stock solution in DMSO, resuspend 10 mg in 1.95 mL of DMSO.

Prepare stock solution fresh before use. Information regarding stability of small molecules in solution has rarely been reported, however, as a general guide we recommend storage in DMSO at -20°C. Aliquot into working volumes to avoid repeated freeze-thaw cycles. The effect of storage of stock solution on compound performance should be tested for each application.

Compound has low solubility in aqueous media. For use as a cell culture supplement, stock solution should be diluted into culture medium immediately before use. Avoid final DMSO concentration above 0.1% due to potential cell toxicity.

Published Applications

CANCER

- Inhibits proliferation of multiple cancer cell lines, such as U87MG (glioblastoma), PC3 (prostate) and MDA-MB-361 (breast) lines, in vitro and in mouse xenograft models (Folkes et al.; Raynaud et al.; O'Brien et al.).
- Induces apoptosis and inhibits xenograft tumor growth in combination with a MAP/ERK kinase (MEK) inhibitor GDC-0973 (Hoefflich et al.).
