Description

Isolate highly purified CD90.1+ (Thy1.1+) cells from mouse splenocytes, lymph nodes, and peripheral blood by immunomagnetic positive selection. This kit can be used for the isolation of CD90.1+ cells from adoptive cell transfer (ACT) samples. When using single-cell suspensions from other tissue types, this kit may require optimization.

- Fast and easy-to-use
- Up to 97% purity
- No columns required
- Isolated cells are not fluorochrome-labeled

This kit targets CD90.1+ cells for positive selection with an antibody that recognizes the CD90.1 surface marker. Desired cells are labeled with antibodies and magnetic particles, and separated without columns using an EasySep™ magnet. Unwanted cells are simply poured off while desired cells remain in the tube. Isolated cells are immediately available for downstream applications such as flow cytometry, culture and cell-based experiments.

Sample Preparation

SPLEEN or LYMPH NODE

Disrupt spleen or lymph node in recommended medium. Remove clumps and debris by passing cell suspension through a 70 µm mesh nylon strainer. Centrifuge at 300 x g for 10 minutes and resuspend at 1 x 10^8 nucleated cells/mL in recommended medium.

Ammonium chloride treatment is not recommended when preparing the cells for separation.

PERIPHERAL BLOOD

Blood should be lysed prior to use. Mix 1 part blood with 9 parts Ammonium Chloride Solution (Catalog #07800) and incubate on ice for 15 minutes. Centrifuge at 300 x g for 6 minutes. Discard supernatant and wash cell pellet once with recommended medium. Discard supernatant and resuspend cell pellet at 1 x 10^8 cells/mL in recommended medium. If there are less than 5 x 10^7 cells/mL, resuspend in 500 µL of recommended medium.

Recommended Medium

EasySep™ Buffer (Catalog #20144), RoboSep™ Buffer (Catalog #20104), or PBS (Catalog #37350) containing 2% fetal bovine serum (FBS) and 1 mM EDTA. Hanks' Balanced Salt Solution (HBSS), Modified without Ca++ and Mg++ (Catalog #37250) can be used in place of PBS. Medium should be free of Ca++ and Mg++.

Notes and Tips

MOUSE STRAINS

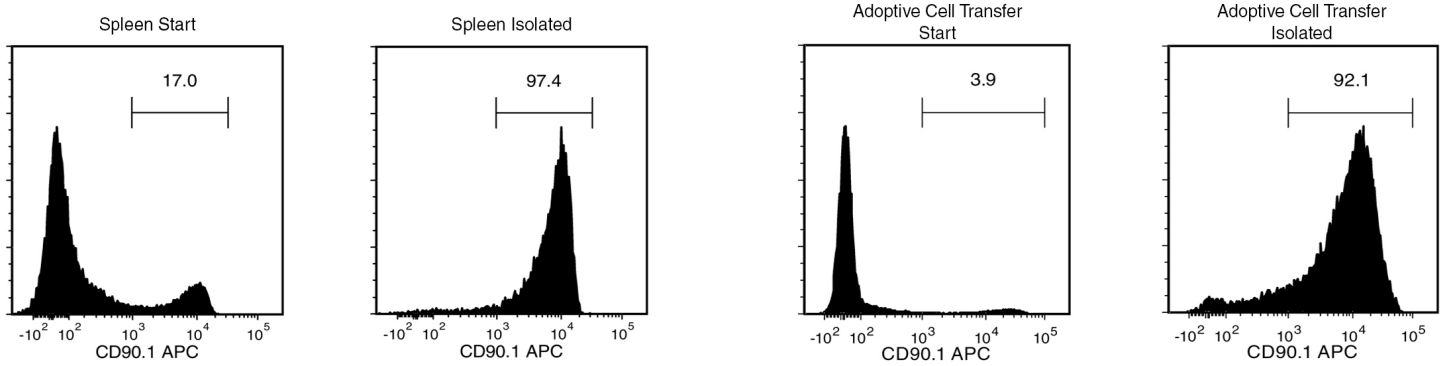
This kit has been verified for use with FVB mouse strains and is expected to be compatible with other Thy1.1+ strains.

ASSESSING PURITY

For purity assessment of CD90.1 cells by flow cytometry, use fluorochrome-conjugated:

- Anti-Rat CD90 Antibody, Clone OX-7 (Catalog #60024)

Data



Starting with mouse splenocytes, the CD90.1+ (Thy1.1+) cell content of the isolated fraction is typically 93.5 ± 3.9% (mean ± SD; using the purple EasySep™ Magnet). Starting with mouse splenocytes from adoptive cell transfer samples, the CD90.1+ (Thy1.1+) cell content of the isolated fraction is typically 90.8 ± 1.5% (mean ± SD; using the purple EasySep™ Magnet).
